

## Tip Dönüşümleri (Type Conversation And Casting)

long, int, short, byte, float, double, boolean, char ve String tiplerinin bir birlerine dönüşümleri

	long	int	short	byte
a	long	long a=(long) b	long a=(long) c	long a=(long) d
b	int	int b=(int) a	int b=(int) c	int b=(int) d
c	short	short c=(short) a	short c=(short) b	short c=(short) d
d	byte	byte d=(byte) a	byte d=(byte) b	byte d=(byte) c
e	double	double e=(double) a	double e=(double) b	double e=(double) c
f	float	float f=(float) a	float f=(float) b	float f=(float) c
g	boolean	boolean g=(boolean) a	boolean g=(boolean) b	boolean g=(boolean) c
h	char	char h=(char) a	char h=(char) b	char h=(char) c
k	String	String k=Long.toString(a)	String k=Integer.toString(b)	String k=Short.toString(c)

	double	float
a	long a=(long) e	long a=(long) f
b	int b=(int) e	int b=(int) f
c	short c=(short) e	short c=(short) f
d	byte d=(byte) e	byte d=(byte) f
e	double e=(double) a	double e=(double) b
f	float f=(float) a	float f=(float) b
g	boolean g=(boolean) e	boolean g=(boolean) f
h	char h=(char) e	char h=(char) f
k	String k=Double.toString(e)	String k=Float.toString(f)

	boolean
a	long a=(long) g
b	int b=(int) g
c	short c=(short) g
d	byte d=(byte) g
e	double e=(double) g
f	float f=(float) g
g	boolean g=(boolean) a
h	char h=(char) g
k	String k=Boolean.toString(g)

	char	String
a	long a=Character.toString(h).charAt(0)	long a=Long.toString(k)
b	int b=(int) h	int b=Integer.toString(k)
c	short c=(short) h	short c=Short.toString(k)
d	byte d=(byte) h	byte d=Byte.toString(k)
e	double e=(double) h	double e=Double.toString(k)

f	float	float f=(float) h	float f=Float.toString(k)
g	boolean	boolean g=(boolean) h	boolean g=Boolean.toString(k)
h	char		char h=Character.toString(k)
k	String	String k=Character.toString(h)
